

FOR IMMEDIATE RELEASE:

ARCHITECTURAL LIGHTING WORKS (ALW) LIGHTPLANE 11 Linear Series: Integrating the Latest in Lamp and Control System Technology

HAYWARD (December 2008) – The LIGHTPLANE 11 Series by Architectural Lighting Works is a highly versatile, extruded aluminum linear system. Each LIGHTPLANE 11 design can integrate with the most efficient and sophisticated of lamp sources and control systems, including ceramic metal halide, fluorescent and LED lamps, along with control and daylight systems, occupancy and motion sensors and much more. The 100% recyclable natural aluminum greatly enhances the modern aesthetic of any commercial interior, along with meeting efficiency requirements for sustainable design.

About Architectural Lighting Works:

Architectural Lighting Works is an innovator in architectural lighting. Fixtures are designed with elegant, balanced shapes and strong, understated lines. By combining high-performance, precision reflectors with the most energy efficient lamp sources, designs are tailor made to designer's exact project requirements. ALW is locally owned, designed and manufactured in Hayward, California, United States.
